

REPRESENTING THE STRUCTURAL
BUILDING COMPONENTS INDUSTRY

Membership in WTCA Chapters

WTCA Chapters play a key role in the future of the structural building components industry. By working together through chapters, members are able to:

- **Have more clout** as a unified group than as individuals acting alone
- **Produce results more effectively** working together than individuals since there is no duplication of effort
- **Share ideas and goals** at the local level and set an agenda for your chapter
- **Participate in decision making** for the industry and help shape the future

The benefits of working collectively through a chapter are apparent and many goals are achieved more easily as a chapter than by individual companies.

Save Money with WTCA Chapter Publications Cooperatives

Chapter members qualify automatically for the publications co-op covering their chapter. The potential savings from possible quantity discounts each month are great. All WTCA publications are included in the co-op as well as other products and even educational courses. Any discounts earned on orders are credited back to each company at the end of the month.

Education & Marketing:

Since the association is viewed as an independent entity with no proprietary interest and no strong product sales bias, it is easier to:

- **Provide education to contractors, architects, engineers and specifiers** on the features and benefits of component construction as we expand the market for our products.
- **Educate local building officials** on proper use, features and benefits of structural building components.
- **Undertake education projects with the fire service** to lead to better understanding of our industry and products.
- **Provide plant tours** for building officials, the fire service, architects and engineers as well as others involved in our industry.
- **Provide new promotional materials** with consistent messages, warnings and application information to the marketplace while keeping a reasonable production cost.
- **Work with local schools** to provide educational materials, including community colleges, universities, high schools and technical schools.

Legislation:

Especially in the political arena, the voice of an association adds to the strength of individual contacts. Together we can:

- **Act to limit adverse national legislation** by meeting with the staff of local congressional offices of our Representatives and Senators, or with the Representatives and Senators themselves when they are in their home states.
- **Act to influence national and local policy** as it is being developed by government agencies such as OSHA, the Department of Labor, the EPA and state or local departments.
- **Stay informed of local ordinances and building code changes.** These are often the most difficult track, and they can greatly restrict the use of our products. Chapters have the opportunity to meet with key groups in their states to build alliances instead of adversarial relationships through the development and maintenance of good lines of communication.
