CODE CHANGE PROPOSAL FORM

(See instructions on page 2)

Code: IECC –09/10

402.2.1, 502.2.1

Proponent: *Larry Wainright, Qualtim, Inc, representing the Structural Building Components Industry*

Revise as follows:

402.2 Specific insulation requirements (Prescriptive).

402.2.1 Ceilings with attic spaces. When Section 402.1.1 would require R-38 in the ceiling, R-30 shall be deemed to satisfy the requirement for R-38 wherever the full height of uncompressed R-30 insulation extends over the wall top plate at the eaves. Similarly, R-38 shall be deemed to satisfy the requirement for R-49 wherever the full height of uncompressed R-38 insulation extends over the wall top plate at the eaves. This reduction shall not apply to the *U*-factor alternative approach in Section 402.1.3 and the total UA alternative in Section 402.1.4. Where the required insulation depth is greater than the ceiling joist depth, no storage shall be permitted.

502.2.1 Roof assembly. The minimum thermal resistance (*R*-value) of the insulating material installed either between the roof framing or continuously on the roof assembly shall be as specified in Table 502.2(1), based on construction materials used in the roof assembly.

Exception: Continuously insulated roof assemblies where the thickness of insulation varies 1 inch (25 mm) or less and where the area-weighted *U*-factor is equivalent to the same assembly with the *R*-value specified in Table 502.2(1).

Where the required insulation depth is greater than the ceiling joist depth, no storage shall be permitted. Insulation installed on a suspended ceiling with removable ceiling tiles shall not be considered part of the minimum thermal resistance of the roof insulation.

Reason:

The intent of this provision is to prohibit attic spaces to be used for storage where the insulation would need to be compressed in order to accommodate the storage area, thereby rendering the insulation less effective. The insulation layer needs to be uncompressed to achieve its rated *R*-value. This provision will help assure the intended *R*-value is achieved.

Cost Impact: This provision will not increase the cost of construction.
